

Computer Systems Performance Analysis and Benchmarking (37-235)

Analytic Modelling

Simulation

Measurements / Benchmarking

Lecture by:

Prof. Thomas Stricker

Assignments/Projects:

Christian Kurmann

Textbook:

Raj Jain, "The Art of Computer Systems Performance Analysis", 1991 Wiley & Sons, New York

Topic of Today:

- **A systematic approach to Evaluation**
- **Evaluation Techniques (Selection)**
- **Popular Benchmarks**

1.11.01 - 1 37-235 Perf.Eval.&Benchmarking © Stricker

- **List services and outcomes**

- Network transports user packets
- Database system responds to queries

Outcomes:

- Packets are lost or delayed.
Define what is acceptable?
- Database queries are answered wrongly or hung due to a deadlock.
Define what is acceptable - what not?

1.11.01 - 3 37-235 Perf.Eval.&Benchmarking © Stricker

A Systematic Approach

- **Define the system and state goals**

Given: two CPUs

Wanted: better timesharing system

Given: two integer ALUs

Wanted: best implementation of an architecture

What are the boundaries?

1.11.01 - 2 37-235 Perf.Eval.&Benchmarking © Stricker

- **Select Metrics:**

Criteria to compare performance

- Speed
- Accuracy
- Availability of services

- **List parameters**

System parameters are software and hardware characteristics that are usually held constant during study.

Workload parameters are characteristics of the users request, that typically vary from one installation to another.

1.11.01 - 4 37-235 Perf.Eval.&Benchmarking © Stricker

- **Select factors**

These are the parameters that vary.
Values are levels.

We expect high impact on systems performance.

- **Select evaluation technique**

- analytic modeling
- simulation
- measuring a real system

- **Select workload**

- Analytic model:
Probability/Distribution of requests.
- Simulation:
Traces of requests.
- Measurement:
User scripts, sample problem.

- **Design an experiment**

Sequence of steps (simulations, measurements) that offer maximal information, maximal coverage with minimal effort.

Fractional factorial experimental design.

- **Analyze and interpret data**

- Deal with randomness and variability.
- Interpret the results of the analysis.
- Prepare to draw conclusions.

- **Present data properly**

- Spreadsheets, charts and graphics
- Integral part of activity turn around time important
